

*One of Australia's most successful soils courses for farmers. This course is for farmers, graziers and land managers who want to build strong soil management skills.*

Soil Land Food has delivered this course in NSW and Qld since 2012 and have had many farmers and graziers go through it. Delivered over 5 or 6 days on farm it uses real soils, real situations and soil tests. At the end of this course participants will have a high level of confidence to manage their own soils. The course is delivered in a group so everyone learns from each other. The course is holistic and covers biological and well as chemical approaches to soils management. It does not matter if you are a regenerative, biological, organic or conventional farmer or grazier. This course will take your soil knowledge to another level. In this course we cover:

- Soils and how they function
- Soil nutrients on the farm
- How different farm practises affect soil health and fertility
- Reading soil tests with confidence
- Identifying and mapping soil types across your property

- Assessing soil health in the paddock and using soil tests
- Monitoring your soil
- Identifying soil constraints such as low organic matter, pH, soil salinity and compaction.
- Setting benchmarks for your soils
- Taking effective action to address soil issues that are impacting on the farm business and landscape.
- Managing soil nutrients effectively
- Biofertilisers, fertilisers, soil amendments and the range of fertility input options.
