

# Soils, Composting & Biofertilisers

2 day course

*Build your skills to manage your soil with confidence, learn to make and use compost and learn the fundamentals of biofertilisers and bioferments on farm.*

In this hands-on 2 day Course participants explore soils and the keys steps to managing them, learn the theory behind fermentation based bioferments and biofertilisers and how to make compost on farm. The course is hands on with numerous practical activities to build your soil skills and includes hands on sessions in making composts, bioferments and biofertilisers on farm. Topics covered include:

- Soils and how they function
- Soil Health and how to manage it
- How different farm practises affect soil health and fertility
- Farm fertility inputs
- Biofertilisers, bioferments and biostimulants
- On farm composting: aerobic & fermentation
